KEY FEATURES OF THE ILP SUB-FUND

WHAT ARE YOU INVESTING IN?

- You are investing in an ILP Sub-Fund that invests into a portfolio of Underlying Funds: Allianz Income and Growth, Amundi Funds – Income Opportunities and BlackRock Premier Funds – Systematic Global Equity High Income Fund.
- The ILP Sub-Fund aims to provide long term capital growth and income by investing in a diversified portfolio of Underlying Funds.
- You may receive monthly distributions if you are invested in a distributing share class. The Manager intends to make a distribution on or around the fifteenth Business Day in each month of every calendar year or such other dates as the Manager may in its absolute discretion determine. Dividends are not assured and are subject to the Manager's discretion. They may be paid out of capital or effectively out of capital and reduce the ILP Sub-Fund's net asset value.

Refer to *Sch 1, Sec a – Structure, Sec b – Investment Objective and Sec g – Distribution Policy* of the FIB for further information on features of the ILP Sub-Fund.

Investment Strategy

- The ILP Sub-Fund will invest into Underlying Funds having differing investment strategies and objectives.
- The Manager may from time to time at their sole discretion vary the percentage of assets of the Underlying Funds by utilizing a multi-manager approach to achieve its investment objective and enhance downside protection.
- The asset allocation may vary depending on market conditions and outlook. There will be regular reviews and rebalancing of the portfolio to generate the most optimal combination of risk and return against the market outlook.
- The ILP Sub-Fund is actively managed without reference to a benchmark.

KEY RISKS

WHAT ARE THE KEY RISKS OF THIS INVESTMENT?

The value of the ILP Sub-Fund may rise or fall. These risk factors may cause you to lose some or all of your investment:

Refer to *Sec 5 – Risks* on the FIB for further information on risks of the ILP Sub-Fund.

Market and Credit Risks

- **You are exposed to Currency Risk**
 - The Underlying Fund may hold assets or have a share class denominated in foreign currencies. If these foreign currency positions have not been hedged or if there is any change in the relevant exchange control regulations, the net asset value of the Underlying Fund or its share classes may be affected unfavourably.

Refer to *Sec 5 – Risks* on the FIB for further information on risks of the ILP Sub-Fund.

- **You are exposed to Country and Region Risk**
 - If an Underlying Fund focuses its investments on particular countries or regions, this may increase the concentration risk. The Underlying Fund is susceptible to the adverse economic, political, policy, foreign exchange, liquidity, tax, legal or regulatory event or development in and risks of this region, or of companies based and / or operating in this region.
- **You are exposed to Emerging Markets Risk**
 - Emerging markets are less established than developed markets and therefore involve higher risks, particularly market, liquidity, currency risks and interest rate risks, and the risk of higher volatility.
- **You are exposed to Equity Risk**
 - Equities can lose value rapidly, and typically involve higher risks than bonds or Money Market Instruments (“MMIs”). If a company goes through bankruptcy or a similar financial restructuring, its equities may lose most or all of their value.
- **You are exposed to General Market Risk**
 - The Underlying Fund is exposed to various general trends and tendencies in the economic and political situation as well as securities markets and investment sentiment, which may lead to substantial and longer-lasting drops in prices affecting the entire market.
- **You are exposed to Interest Rate Risk**
 - If market interest rates rise, the value of the interest-bearing assets held by the Underlying Fund may decline substantially. This applies to an even greater degree if the Underlying Fund also holds interest-bearing securities with a longer time to maturity and a lower nominal interest rate.

Liquidity Risks

- **The ILP Sub-Fund is not listed and you can withdraw your units only on Business Days.**
 - There is no secondary market for the units in the ILP Sub-Fund. All withdrawal applications should be submitted to the Product Provider.
- **You may not be able to perform a withdrawal of units during any period where dealing is suspended.**
 - Your right to withdraw units may be temporarily suspended under certain circumstances.

Refer to *Sec 5 – Risks* and *Sec 10 – Suspension of Dealing* of the FIB for further information on suspension of dealing of the ILP Sub-Fund

Product-Specific Risks

- **You are exposed to Asset Allocation Risk**
 - There is no assurance that the strategy employed by the Underlying Fund will be successful and therefore the investment objective of the Underlying Fund may not be achieved. The investments of the Underlying Fund may be periodically rebalanced and therefore may incur greater transaction costs.
- **You are exposed to Credit Rating Risk**
 - Credit ratings assigned by rating agencies are subject to limitations and do not always guarantee the creditworthiness of the security and/or issuer.
- **You are exposed to Derivatives Risk**
 - The leverage element/component of a derivative can result in a loss significantly greater than the amount invested in the derivative by the Underlying Fund. In an adverse situation, if the use of derivatives for hedging and efficient portfolio management becomes ineffective, the Underlying Fund may suffer significant losses
- **You are exposed to Foreign Investments Restrictions Risk**
 - Some countries prohibit or restrict investment, or the repatriation of income, capital or the proceeds from sale of securities. The Underlying Fund may incur higher costs investing in these countries. Such restrictions may delay the investment or repatriation of capital of the Underlying Fund.
- **You are exposed to High-Yield Risk**
 - High-Yield funds are lower-rated and are usually offer higher yields to compensate for the reduced creditworthiness and risk of default.
- **You are exposed to Risk of Distribution out of Capital**
 - The Underlying Fund may make distributions out of its capital (if income is insufficient). This may cause its NAV to fall, and amount to partial return of your original investment and reduced future returns.
- **You are exposed to Valuation Risk**
 - Valuation of the Underlying Fund assets may involve uncertainties and judgmental determinations which may affect the net asset value calculation of the Underlying Fund

Refer to *Sec 5 – Risks* on the FIB for further information on risks of the ILP Sub- Fund.
