Investment Policy

The fund invests in real estate companies established, listed or traded on exchanges across the world. This includes companies which main revenue or activity is linked to real estate property, management and/or development. The portfolio is diversified across countries. Measured over a period of several years, we aim to beat the performance of the benchmark 10/40 GPR 250 Global Net Index. We aim to add value to the fund by a systematic bottom-up stock selection approach. This will include both fundamental and behavioural factors as well as Real Estate specific data sources. You can sell your participation in this fund on each (working) day on which the value of the units is calculated, which for this fund occurs daily. The fund does not aim to provide you with a dividend. It will reinvest all earnings.

Risk Profile

SRRI

Historical data, such as is used for calculating this indicator, may not be a reliable indication of the future risk profile of this fund. There is no guarantee that the risk indicator will remain unchanged, it may shift over time. The lowest category of risk does not mean that the investment is risk-free.

This fund is in category 5 because of the behaviour of the product during the measuring period. The overall market risk, taking into account past performances and future potential evolution of the markets, associated with stocks and/or financial instruments used to reach the investment objective is considered high. Stocks and financial instruments are impacted by various factors. These include, but are not limited to, the development of the financial market, the economic development of issuers of stocks and/or financial instruments who are themselves affected by the general world economic situation and the economic and political conditions in each country. The fund's liquidity risk is set to medium. Liquidity risks arise when a specific underlying investment is difficult to sell, causing possible difficulty to redeem your investment from the fund. Moreover, the currency fluctuation may impact highly on the fund's performance. Investments in specific sector are more concentrated than investments in various sectors. No guarantee is provided as to the recovery of your initial investment.

VaR (95% annualized)

The VaR (Value at Risk) is a statistical indicator measuring the maximum annual loss that can be incurred within a certain confidence interval.
