<p>by the Investment Manager to be undervalued.</p> <ul style="list-style-type: none"> The Management Company currently does not intend to declare a dividend with respect to any Share class and therefore any net income and net realised profits attributable to the Shares will be reflected in the respective NAV of the Shares. 	<p><i>"Other Portfolio Information: Distributions"</i> in the Prospectus relating to the Portfolio for key product features.</p>
Investment Strategy	
<p>STRATEGY</p> <ul style="list-style-type: none"> The Portfolio invests primarily in the equities of established companies across a broad range of industries that the Investment Manager has determined to be undervalued. In selecting stocks, the Investment Manager's value investment teams seek to identify companies whose long-term earning power and dividend paying capability are not reflected in the current market price of their securities. The Portfolio invests in a geographically diversified mix of equities in both developed and emerging-market countries, and it may invest in currency-related derivatives to manage the Portfolio's currency risk. At least 90% of the Portfolio's total assets will be invested in equity securities. The Portfolio may use derivatives for efficient portfolio management ("EPM") or hedging purposes. 	<p>Refer to <i>"Investment Objective and Policies"</i> in the Prospectus relating to the Portfolio for further information on the investment strategy.</p>
Parties Involved	
<p>WHO ARE YOU INVESTING WITH?</p> <ul style="list-style-type: none"> The Investment Manager for the Portfolio is AllianceBernstein L.P., a Delaware limited partnership. Brown Brothers Harriman (Luxembourg) S.C.A. has been appointed to act as Administrator and Depositary. 	<p>Refer to <i>"Management and Administration"</i> of the Prospectus for further information on their roles and responsibilities.</p>
KEY RISKS	
<p>WHAT ARE THE KEY RISKS OF THIS INVESTMENT?</p> <p>The value of investments and the income from them, and therefore the value of and income from Shares of the Portfolio, can go down as well as up and you may not get back the amount you invest.</p> <p>These risk factors, among others, may cause you to lose some or all of your investment:</p>	<p>Refer to <i>"Risks"</i> of the Singapore Prospectus for further information on the risks of investing in the Portfolio.</p>
Market and Credit Risks	
<p>You are exposed to global Country Risks. Investments in issuers located in a particular country or geographic region may have more market, political and economic risks because of particular factors affecting that country or region.</p> <p>You are exposed to Currency Risks. Currency movements in the underlying investments of a portfolio that is denominated in a currency different from that of the portfolio itself may significantly affect the NAV of that portfolio.</p>	
Liquidity Risks	
<p>You are exposed to liquidity risks of the underlying fund's investments. Investments in illiquid assets or assets which become illiquid could prevent the Portfolio from promptly liquidating unfavourable positions and, therefore, result in losses to the Portfolio and corresponding decreases in the NAV of the Shares.</p> <p>The Shares are not listed and can only be realised on Business Days. There is no secondary market for the Shares. All realisation requests should be submitted in the manner set out in the Singapore Prospectus.</p> <p>You may not be able to redeem when a redemption limit is imposed or when redemption is suspended. A redemption limit may be imposed if requests are received to redeem more than 10% of the Shares of the Portfolio</p>	

outstanding. Further, your right to redeem may be temporarily suspended under certain circumstances.	
Product-Specific Risks	
<p>You are exposed to Derivatives Risks.</p> <ul style="list-style-type: none"> The Portfolio is entitled to use derivative instruments for hedging and EPM purposes which may involve additional risks different from, and, in certain cases, greater than, the risks presented by more traditional investments. Some of the risks associated with derivatives are market risk, management risk, credit risk, liquidity risk and leverage risk. In adverse situations, the Portfolio's use of derivative instruments may become ineffective in hedging or EPM and the Portfolio may suffer significant losses. The failure of a counterparty to a derivative contract to comply with the terms of that contract could cause the Portfolio to suffer a loss. <p>You are exposed to Equity Securities Risks. The value of underlying equity investments of the Portfolio may fluctuate in response to the activities and results of individual companies, or because of general market and economic conditions and changes in currency exchange rates.</p> <p>You are exposed to Focused Portfolio Risk. The Portfolio may invest in a limited number of issuers, industries or sectors or countries and may therefore be subject to greater volatility than a portfolio invested in a larger or more diverse array of securities. Such concentration could expose such investors to losses disproportionate to market movements in general if there are disproportionately greater adverse price movements in securities in which the Portfolio is invested.</p>
