KEY RISKS

These risk factors may cause you to lose some or all of your investment.

Refer to “Risk Factors” on page 26 of the Singapore Prospectus for further information on risks of the product

Market and Credit Risks

The Fund may be subject to Credit Risk of Issuers

- ▶ The Fund may be exposed to the credit/default risk of bonds that it invests in. In the event of bankruptcy or default of an issuer, the Fund may experience losses and incur costs.
- ▶ The actual or perceived downgrading of a rated debt security could decrease its value and liquidity, and may have an adverse impact on the Fund. However, the Fund may continue to hold it to avoid a distressed sale.

The Fund may be subject to Currency Risks

- ▶ Foreign currency exchange rate movements are likely to influence the returns to investors in Singapore, hence investors may be exposed to exchange rate risks.
- ▶ For Hedged Share Classes, while the Fund attempts to hedge currency risks, there can be no guarantee that it will be successful in doing so.

The Fund may be subject to Delayed Delivery Transactions Risks

- ▶ The Fund may commit to buy a mortgage-backed security from a mortgage pool for a fixed price at a future date, where the exact security is not known but the main characteristics are specified (a “To Be Announced” security/“TBA”). TBAs may involve counterparty default risk and a risk that the agreed (fixed) price is higher than the prevailing market price at the settlement date. These may have an adverse impact on the value of the Fund.

The Fund may be subject to Emerging Market Risks

- ▶ The Fund may invest in one or more emerging markets and may be subject to a higher than average volatility than investing in more developed markets due to greater political, tax, economic, social, foreign exchange, custodial, liquidity, regulatory or other risks.

The Fund may be subject to Foreign Investment Restrictions Risks

- ▶ Some countries prohibit or restrict investment, or the repatriation of income, capital or the proceeds from sale of securities. The Fund may incur higher costs investing in these countries. Such restrictions may delay the investment or repatriation of capital of the Fund.

The Fund may be subject to Interest Rate Risks

- ▶ An increase in interest rates may adversely affect the value of the bonds held by the Fund.

The Fund may be subject to Sovereign Debt Risks

- ▶ The Fund may invest in bonds issued or guaranteed by governments or authorities, which may involve political, economic, default, or other risks.

Liquidity Risks

- ▶ Redemptions may be suspended in certain circumstances detailed in the Prospectus.

Product Specific Risks

The Fund may be subject to Capital Growth Risks

- ▶ The Fund pursues an investment strategy in order to generate income and may pay dividends from capital or net gains, which may reduce capital and the potential for capital growth and future income of the Fund.

The Fund may be subject to Derivatives Risks

- ▶ The use of derivatives may expose the Fund to a higher degree of risk. Derivative contracts can be highly volatile and a relatively small market movement may have a potentially larger impact on derivatives than on standard bonds or equities. Leveraged derivative positions can hence increase the Fund's volatility. The Fund may sustain loss as a result of the failure of a derivatives counterparty to comply with the terms of the derivatives contract.
- ▶ The Fund may also use derivatives to facilitate more complex efficient portfolio management techniques.

The Fund may be subject to Distressed Securities Risks

- ▶ The Fund may invest in securities issued by a company that is in financial difficulty or in default. This involves significant risk. There is no guarantee that any exchange offer or reorganisation will be successfully completed.

The Fund may be subject to Non-Investment Grade Bonds Risks

- ▶ The Fund may invest in non-investment grade bonds. This may subject the Fund to higher credit/default risks, volatility and liquidity risks than investment grade bonds.

The Fund may be subject to the risks of Securities Lending

- ▶ The Fund may engage in securities lending. As such, the Fund will have a credit risk exposure to the counterparties to any securities lending contract. The Fund's investments can be lent to counterparties over a period of time. A default by the counterparty combined with a fall in the value of the collateral below that of the value of the securities lent may result in a reduction in the value of the Fund.
