 Variation allowed in asset mix: +/- 20%
- In determining the asset mix amongst the underlying equity fund, bond funds and cash, the Manager adopts a valuation based investment approach and aims to exploit market inefficiency and dispersion of investment returns.

KEY RISKS

WHAT ARE THE KEY RISKS OF THIS INVESTMENT?

The value of the product and its dividends or coupons (if any) may rise or fall. These risk factors may cause you to lose some or all of your investment:

Refer to Section 6.3 on Pg 7 and Section 9 on Pg 9 of the Prospectus for further information on risks of the product.

Market and Credit Risks

You are exposed to market risks in Asian (ex-Japan) and United States markets.

- The value of your investments may go up and down due to normal market fluctuations in the equity and bond markets in Asia (ex-Japan) and the United States that the underlying funds invest in.

You are exposed to interest rate and credit risks.

- The underlying funds invest in bonds which are subject to interest rate fluctuations and credit risks, such as risk of default by issuers.

You are exposed to emerging markets risks.

- The underlying fund invests in emerging markets which involve a greater risk of loss and are more volatile than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity, volatility and regulatory risks.

You are exposed to currency risks.

- The underlying funds' investments may be denominated in currencies that differ from the currency of the Fund, and accordingly, fluctuations in the exchange rates of these foreign currencies may affect the value of your units.

You are exposed to counterparty risks.

- The underlying funds will be exposed to the credit risk on counterparties with which it trades and any default by such a counterparty (for example, due to insolvency) could result in substantial losses to the underlying fund and, in turn, the value of your units.

You are exposed to liquidity risks of the underlying funds' investments.

- The underlying funds may have investments which have high liquidity risks (for example, low trading volumes) and may incur substantial losses if they are unable to sell these investments at opportune times or prices.

Liquidity Risks

The Fund is not listed and you can realise your units only on Business Days.

- There is no ready secondary market for the units in the Fund. All realisation requests should be submitted in the manner set out in the Prospectus.

Your realisation request may be deferred or suspended.

- There may be a 10% limit on the number of units that can be realised and converted on a Dealing Day. Therefore, your realisation request may be deferred to the next Dealing Day (which is subject to the same limit) if realisations exceed the limit on that day.
- Your right to realise units may also be temporarily suspended under certain circumstances as described in the Prospectus.

Product-Specific Risks

You are exposed to derivatives risks.

- The Fund and/or the underlying funds may use derivative instruments, including futures, swaps, options and forwards, for efficient portfolio management and/or hedging purposes.
- Derivatives involve risks different from, and, in some cases, greater than, the risks presented by more traditional securities investments. Some of the risks associated with derivatives are market risk, management risk, credit risk, liquidity risk, operational risk and leverage risk.

You are exposed to Asset Backed Securities (“ABS”) and Mortgage Backed Securities (“MBS”) risks.

- ABS are generally limited recourse obligations of the issuers, and holders of ABS including the underlying funds must rely solely on the cash flows generated from the underlying assets of the issuer and proceeds thereof (“ABS Assets”). In addition, interest payments on ABS (other than most senior tranche of an issue) are generally subject to deferral. ABS Assets are usually illiquid in nature and are subject to risks, including market, credit and interest rates risk. The aggregate return on the ABS Assets will depend in part upon the ability of the relevant investment manager to actively manage the related portfolio of the ABS Assets.
- The risk of ABS applies to MBS.
