KEY PRODUCT FEATURES

WHAT ARE YOU INVESTING IN?

- You are investing in a unit trust constituted in Singapore that aims to maximise total returns over time by investing primarily in Singapore-dollar denominated debt securities and foreign currency debt securities which will be hedged backed into Singapore dollars.
- You may receive quarterly distributions if you invest in Class AD. The Manager will decide whether distributions will be made based on, amongst other factors, prevailing market conditions and income from underlying investments. **Distributions are not guaranteed.** Distribution payments shall, at the sole discretion of the Manager, be made out of either (a) income; or (b) net capital gains; or (c) capital of the Fund or a combination of (a) and/or (b) and/or (c). The Manager may also vary the frequency and/or amount of the distributions made. Any payment of distributions by the Fund may result in an immediate decrease in the net asset value per unit.

Refer to Section 1 on Pg 1 and Schedule 10 on Pg 75 of the Prospectus for further information on features of the product.

¹ The Prospectus is available for collection at Eastspring Investments (Singapore) Limited, 10 Marina Boulevard #32-01 Marina Bay Financial Centre Tower 2 Singapore 018983, during business hours or accessible at www.eastspring.com.sg.

Investment Strategy

- The Fund will invest primarily in Singapore-dollar denominated debt securities, including the Singapore government securities, investment grade and/or unrated debt securities issued by Singapore statutory boards and Singapore-incorporated entities as well as investment grade debt securities issued by entities outside Singapore.
- The Fund may also invest up to 30% of its assets in foreign currency-denominated debt securities issued by the above entities (hedged back into Singapore dollars). Additionally, the Fund may employ derivatives for hedging or efficient portfolio management purposes.
- The Manager uses a “top-down” approach through economic and market analysis to establish the Fund’s duration, yield curve and credit strategies.
- This is complemented with a “bottom-up” credit selection, which involves the research and analysis of bond issuers, to identify good value opportunities and to manage credit risks.

Refer to Schedule 10 on Pg 75 of the Prospectus for further information on the investment strategy of the product.

KEY RISKS

WHAT ARE THE KEY RISKS OF THIS INVESTMENT?

The value of the product and its distributions (if any) may rise or fall. These risk factors may cause you to lose some or all of your investment:

Refer to Section 6.3 on Pg 6 and Section 9 on Pg 8 of the Prospectus for further information on risks of the product.

Market and Credit Risks

You are exposed to market risks.

- The value of your investments may go up and down due to normal market fluctuations in the bond markets that the Fund invests in.

You are exposed to interest rate and credit risks.

- Bonds are subject to interest rate fluctuations and credit risks, such as risk of default by issuers.

You are exposed to counterparty risks.

- The Fund will be exposed to the credit risk on counterparties with which it trades and any default by such a counterparty (for example, due to insolvency) could result in substantial losses to the Fund.

You are exposed to liquidity risks of the Fund’s investments.

- The Fund may have investments which have high liquidity risks (for example, low trading volumes) and may incur substantial losses if it is unable to sell these investments at opportune times or prices.

Liquidity Risks

The Fund is not listed and you can realise your units only on Business Days.

- There is no ready secondary market for the Fund. All realisation requests should be submitted in the manner set out in the Prospectus.

Your realisation request may be deferred or suspended.

- There may be a 10% limit on the number of units that can be realised and converted on a Dealing Day. Therefore, your realisation request may be deferred to the next Dealing Day (which is subject to the same limit) if realisations exceed the limit on that day.
- Your right to realise units may also be temporarily suspended under certain circumstances as described in the Prospectus.

Product-Specific Risks

You are exposed to derivatives risks.

- The Fund may use derivative instruments, including futures, swaps, options and forwards, for efficient portfolio management and/or hedging purposes.
- Derivatives involve risks different from, and, in some cases, greater than, the risks presented by more traditional securities investments. Some of the risks associated with derivatives are market risk, management risk, credit risk, liquidity risk, operational risk and leverage risk.

You are exposed to Asset Backed Securities (“ABS”) and Mortgage Backed Securities (“MBS”) risks.

- ABS are generally limited recourse obligations of the issuers, and holders of ABS including the Fund must rely solely on the cash flows generated from the underlying assets of the issuer and proceeds thereof (“ABS Assets”). In addition, interest payments on ABS (other than most senior tranche of an issue) are generally subject to deferral. ABS Assets are usually illiquid in nature and are subject to risks, including market, credit and interest rates risk. The aggregate return on the ABS Assets will depend in part upon the ability of the relevant investment manager to actively manage the related portfolio of the ABS Assets.
- The risk of ABS applies to MBS.

You are exposed to concentration risks.

- The Fund may primarily invest in a limited number of countries which will carry a higher concentration risks than a diversified fund.

You are exposed to the risk of distributions out of capital.

- Distributions for Class A_D may be sourced from capital from time to time. Such capital distributions represent a return or withdrawal of part of the amount the investors originally invested and/or capital gains attributable to the original investment and will result in a reduction in the net asset value of the relevant Class and reduce the capital available for future investment and capital growth. Future capital growth may therefore be constrained as a result.
