Product-Specific Risks

- **You are exposed to counterparty risk.**
 - The counterparty to a derivative or other contractual agreement or synthetic financial product could become unable to honour its commitments to the Underlying Fund, potentially creating a partial or total loss for the Underlying Fund.
- **You are exposed to money market and deposits risk.**
 - A failure of a deposit institution or an issuer of a money market instrument could create losses.
- **You are exposed to currency risk.**
 - The Underlying Fund can be exposed to different currencies. Changes in foreign exchange rates could create losses.
- **You are exposed to high yield bond risk.**
 - High yield bonds (normally lower rated or unrated) generally carry greater market, credit and liquidity risk.
- **You are exposed to interest rate risk.**
 - A rise in interest rates generally causes bond prices to fall.
- **You are exposed to leverage risk.**
 - The Underlying Fund uses derivatives for leverage, which makes it more sensitive to certain market or interest rate movements and may cause above-average volatility and risk of loss.
- **You are exposed to emerging and frontier markets risk.**
 - Emerging markets, and especially frontier markets, generally carry greater political, legal, counterparty and operational risk.
- **You are exposed to distribution policy risk (only applicable to Distribution Class).**
 - In respect of a Distribution Class with fixed dividends, fixed dividends may be paid out of capital if investment income is less than the fixed dividend amount.
 - In respect of a Distribution Class with variable dividends, the dividends are paid out of capital rather than out of investment income. Capital growth will be reduced and in periods of low growth, capital erosion may occur.
 - Where dividends are paid out of capital of a Distribution Class, this will reduce the net asset value of the Distribution Class.
- **You are exposed to derivatives risk.**
 - The Underlying Fund may use derivatives as part of the investment process. The use of futures, options, warrants, forwards, swaps or swap options involves increased risk. The Underlying Fund's ability to use such instruments successfully depends on the Investment Manager's ability to accurately predict movements in stock prices, interest rates, currency exchange rates or other economic factors and the availability of liquid markets. If the Investment Manager's predictions are wrong, or if the derivatives do not work as anticipated, the Underlying Fund could suffer greater losses than if the Underlying Fund had not used such instruments.
- **You are exposed to operational risk.**
 - Failures at service providers could lead to disruptions of fund operations or losses.
